

Marginal fidelity is item-specific and prompt-sensitive

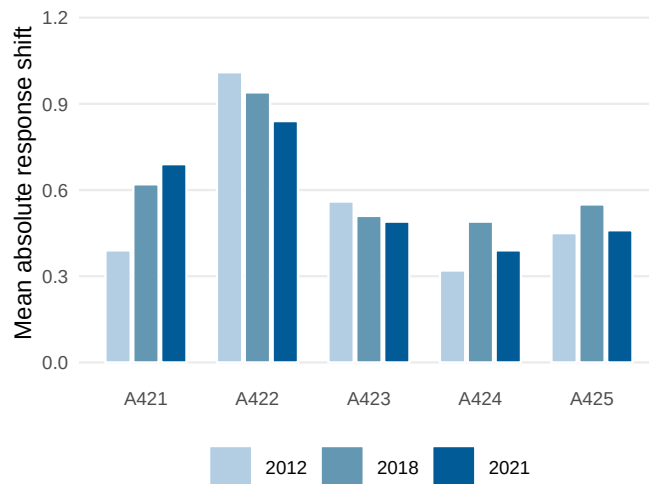

A. Item means under the neutral prompt

B. Prompt ablation: error remains large

C. Same-profile response shifts

Notes: A421 = family role; A422 = male ability; A423 = marriage; A424 = dismissal; A425 = housework. The original prompt discouraged socially desirable answers; the neutral prompt removed that instruction and added verbal labels. All panels use the same 300 profiles.
